

*“Troubleshooting Weak or Bad Valves”*

**Determining Seer**

**if 10 seer, + 30°**

**if 12 seer, + 24°**

**if 14 seer, + 20°**

**80° + 24° = 104°**

**If the pressure on the low side is above  
95psi for R22 or 155psi for R410A**

**Likely problems:**

- 1. TXV that is not metering**
- 2. bad compressor valves**
- 3. leaking reversing valve**
